

**INFORM REACT RECOVER**

# After the alert...

# What happens next?

ONit Alert™ **informs** key personnel with the vital information needed during an alarm. This allows your designated responders to **react** more quickly and effectively, bringing you to a faster **recovery**. ONit Alert™ does this by integrating two-way communication between your key personnel and the central station with **Who's ONit™** and the actions being taken.

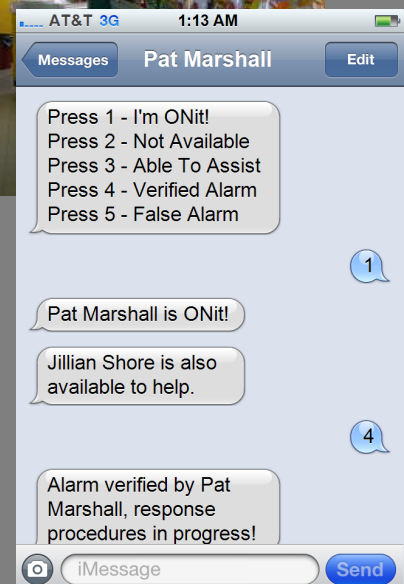

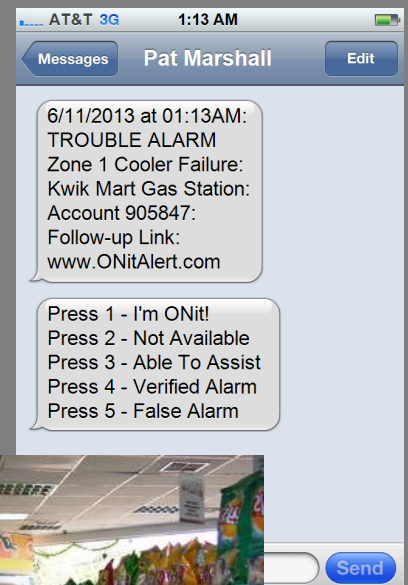

The high-traffic fast-paced environment of a convenience store presents some unique challenges. The traditional security system, although crucial, is limited and cannot offer the complete wrap around response service today's user truly needs.

ONit Alert™ provides next generation monitoring to both store owners and staff by providing them with the critical information of the alarm, **and** giving them the needed tools to help with what to do next.

ONit Alert™ can be configured to work with virtually any device:

- **Emergency Shut-off**
- **Holdup (Panic) Buttons**
- **Cooler & Freezer Monitoring**
- **Flood & Water Detectors**
- **Intrusion Alarm**
- **Fire & Sprinkler Alarm**
- **Gas Detection**
- **ATM/Safe & Cash Handling**
- **Power Failures**
- **And More...**

Going beyond security, ONit Alert's next generation monitoring can help you optimize store operations and aid in business continuity. With ONit Alert™ key personnel can now react, communicate and respond within seconds of an alarm.
